

NEW REFRIGERATION UPGRADE AT FOWLER WELCH

J & E HALL'S SOUTHERN REGIONAL PROJECTS TEAM HAVE RECENTLY CARRIED OUT A CHILLER INSTALL AT FOWLER WELCH, SPALDING

INTRODUCTION

Fowler Welch is a UK supply chain and logistics expert specialising in flexible, reliable and cost effective supply chain services for major names in both supply and retail. Fowler Welch's temperature controlled warehousing allows consolidated, storage and transport services for chilled foods.

PROJECT OVERVIEW

J & E Hall were invited to tender for the refrigeration upgrade at Fowler Welch, Spalding (warehouse 2). The project team was headed up by Tony Golding following a successful install of replacement equipment at their Cullina site in Hoddesden and a large project being carried out at Muller Raunds. All companies form part of the Muller Group.

The client's brief for Spalding was for a chilled glycol system, with ammonia as the primary refrigerant. J & E Hall identified Zudek as having the best solution for this application and they were happy to offer a solution that met the brief both technically and commercially. Zudek was a company that we initially met at Foodex in 2023.

CHALLENGES

When we were presented with challenges such as limited amount of power available on site, Zudek were able to offer a solution while still maintaining the required duty. They were able to assist with projecting energy analysis under different operating conditions, which as a result helped to secure the contact with Fowler Welch.
